

CLICKcentral

Starting guide for the Mirakl Connect Magento Connector

[You can access all of the documentation for the connector here.](#)
(You'll need to be logged into your Click Central Store)

Prerequisites and dependencies Compatibility

- PHP 5.6 or later
- PHP 7

Magento 1 Seller Connector has been successfully tested on the following Magento versions:

- Magento Open Source 1.9.3 or later
- Magento Commerce 1.14.0 or later

To automate your set-up once configured, you'll need to set up Magento Cron Jobs to schedule actions.

You can set Cron jobs to automate operations such as:

- refresh listings
- export products and Price & Stock
- update product and Price & Stock tracking
- synchronize orders

Use the below links to access relevant articles:

- [Choose your method of connector installation](#)
- [Watch the 'Getting Started' video here.](#)

This section describes the very first configurations you must perform in Magento 1 Seller Connector before you can use it:

- [Add Click Central as your Connection \(Step one configuration\)](#)
- [Configure the products that you want to sell \(Step two configuration\)](#)

Once you set up Click Central as a connection and a first listing, you can then go on with the remaining configurations tasks.

- [View required configuration tasks here.](#) (Step three configuration)

Export your Products & Offers

Once the above are completed, you will need to map your product structure using the configuration wizard in your Click Central Store.

- [View the steps to configure your products & first offers here.](#) (Step four configuration)
- If you are able to complete the steps to extract your data from Magento, we can support you with the mapping process in your Click Central store.

This mapping process allows our platform, to read and translate your Magento attribute configuration by matching it to our data fields.
